

London

AFA 203 / CHE 103: Exploring London Through the World of Art and Chemistry
Global + Literary, Visual, & Performing Arts or Natural Science with a Lab Liberal Learning
Led by Lynn Bradley and Elizabeth Mackie

Summer 2019

Program Fee: TBD

App Deadline: February 15th

Through the exploration of art practices and the basic principles of chemistry, students will evaluate current and past practices in art and explore how art and science interface in a modern metropolis. Students will appreciate how science plays a role in creating art and how art may inspire scientific discovery—all in the shadow of Buckingham Palace!

Field trips to museums, galleries, sculpture gardens, public parks, churches, and other venues to view art in London are integral to the course. A course highlight includes an overnight visit to Bath and Lacock Village (filming of Harry Potter). Topics include sculpture, textiles, photography, stained glass, and paper-making, along with a newly designed laboratory component that explores chemical concepts and the properties of materials. The course also focuses on experiencing the cultural aspects of British life and history; students will keep a journal of their daily experiences, discuss their observations, and work on a final photography project that reflects on chemistry, art, and British culture.
